Senator Jonathan Dismang, Co-Chair Representative Frances Cavenaugh, Co-Chair Performance Evaluation & Expenditure Review Committee Arkansas Legislative Council State Capitol Building Little Rock, AR 72201

RE: FY 24 Infrastructure Investment & Jobs Act of 2021

Dear Co-Chairs:

Pursuant to Section 37 (01) of Act 796 of 2023, I am forwarding the attached Infrastructure and Investment and Jobs Act request(s) that have received my approval as Chief Fiscal Officer of the State.

- Department of Public Safety Emergency Management Division –
 Cybersecurity Grant Program Position Only
- Department of Finance and Administration Management and Budget Division – Electric Grid Resiliency Grant \$10,301,440
- Department of Energy and Environment Oil & Gas Commission Earth Mapping Resources Initiative \$330,000
- Department of Energy and Environment Environmental Quality Comprehensive Environmental Response \$500,000
- Department of Energy and Environment Solid Waste Recycling Grant \$531,690
- Department of Public Safety Crime Laboratory Motor Vehicle Crash Toxicology Testing \$357,300

Sincerely

James L. Hudson

Secretary

The Arkansas Department of Public Safety – Arkansas Division of Emergency Management is requesting one GS07 Grants Coordinator position for the State and Local Cybersecurity Grant Program.

Background:

ADEM is the recipient of the State and Local Cybersecurity grant program awarded by the U.S. Department of Homeland Security and reauthorized through the Bipartisan Infrastructure Law (BIL) enacted as the Infrastructure Investment and Jobs Act (IIJA). This grant program is designed to provide funding to state governments to develop, revise, and implement Cybersecurity Plans or to address imminent Cybersecurity Threats.

Purpose/Goal:

This position will be coordinating all programmatic and fiscal responsibilities for the State and Local Cybersecurity Grant Program. ADEM has already received appropriation and funding for this grant in SFY23 and we didn't anticipate the need for any additional positions at the time. However, due to the complexity of the grant and coordinating with Federal, State, County, and City governments, we have determined that an additional position is needed to execute the duties and responsibilities that are required to administer these funds. This position will end with the grant and will be 100% Federally funded.

U.S. Department of Energy Grid Resiliency Grant – Award No. DE-GD0000004

DFA – Office of Intergovernmental Services.

Award Amount \$ 10,301,440 No funds have been disbursed as of October 12, 2023

The U.S. Department of Energy (DOE) awarded Grid Resiliency Grant for the purpose of enhancing America's electrical grid. Arkansas plan to use the grant funds in a manner that aligns with goals established by DOE as they relate to Arkansas citizens:

- To enhance and modernize America's power grid against, wildfires, extreme weather, and other natural disasters.
- To enhance the electrical grid against disruptive events, defined as "event[s] in which operations of the electrical grid are disruptive, preventively shut off, or cannot operate safely due to extreme weather, wildfire or natural disaster".

To meet the program objectives outlined above, and in accordance with DOE's program goals, the Department of Finance and Administration will make grant awards to eligible entities at amounts not to exceed projected funding.

Eligible Enhancement Measures include:

- Weatherization technologies and equipment
- Fire-resistant technologies and fire prevention systems
- Monitoring and control technologies
- The undergrounding of electrical equipment
- Utility pole management
- The relocation of power lines or the reconductoring of power lines with low-sag, advanced conductors
- Vegetation and fuel-load management
- The use or construction of distributed energy resources for enhancing system adaptive capacity during disruptive events, including microgrids and battery-storage subcomponents
- The location of the project (the project must be located within the State of Arkansas)
- Strength and thoroughness of the proposed plan for reporting on the required metrics

This period of performance for the federal award is 09/18/2023 through 04/30/2028.

Period of Performance: October 1, 2023 – September 30, 2024

Total Amount Allocated: \$500,000.00

Performance Partnership Grant? Yes □ No ⊠

If yes, provide the amount of annual funding for PPG and amount for IIJA funding award: N/A

Point of Contact:

Addie Smith (501) 682-0616 addie.smith@adeq.state.ar.us North Little Rock, AR 72118

EPA Strategic Plan:

This Brownfields 128(a) IIJA Work Plan and Budget aligns with EPA's FY 2022 – FY 2026 Strategic Plan Goal 6: Safeguard and Revitalize Communities, which aims to restore land to safe and productive uses to improve communities and protect public health. Specifically, implementation of the Arkansas Brownfield Program contributes to Objective 6.1: Cleanup and Restore Land for Productive Uses and Healthy Communities, which includes cleaning up and restoring contaminated sites to protect human health and the environment.

State or Tribal Program to which the funds will be applied: Section 128(a) annual appropriations will be used to implement the Arkansas Brownfield Program, which serves as the State Response Program for addressing underutilized, abandoned, and potentially contaminated properties in the State of Arkansas.

The Arkansas Brownfield Program seeks to benefit all Arkansans by facilitating the cleanup and reuse of abandoned or underutilized properties; by encouraging sound land use, management, and sustainability; and by returning these properties to tax-producing, beneficial usage while protecting existing jobs and creating new job opportunities.

Two types of Participants may enroll in the Arkansas Brownfield Program: private/for-profit Participants and public/non-profit Participants. For private and for-profit Participants, the Arkansas Brownfield Program provides technical oversight only. No Section 128(a) funding is directly available to these Participants for site-specific work.

For both types of Participants, the general steps of the Arkansas Brownfield Program process are listed below. These steps apply to Participants seeking state liability relief for past releases of CERCLA hazardous substances.

- Application Process
- Phase I Environmental Site Assessment (Phase I ESA)
- Phase II Comprehensive Site Assessment (CSA)
- Implementing Agreement (IA)
- Property Development Plan (PDP)
- Property Development Decision Document (PDDD)
- Completion Report
- Certificate of Completion (COC)

Public and non-profit Participants are eligible for Targeted Brownfield Assessment (TBA) funding through the Arkansas Brownfield Program. TBA funding may be used for assessments, planning, and limited cleanups at eligible sites. In addition to assessing properties for releases of CERCLA hazardous substances, TBA funding may be used to assess properties that are potentially contaminated with CERCLA pollutants and contaminants (such as asbestos and lead-based paint) and/or petroleum-contaminated sites (following a Petroleum Eligibility Determination). TBA recipients are not required to complete all steps of the Arkansas Brownfield Program as listed above unless they are seeking a COC.

The Arkansas Brownfield Program COC is a "golden ticket" for prospective purchasers of contaminated properties. The COC goes beyond assurance that the State of Arkansas will not hold the property owner liable for past contamination at a site; it also ensures that if future issues arise due to environmental conditions identified and addressed in the IA and the CSA, the State of Arkansas is required to address and remedy the problem, provided the Participant has met the conditions of the IA and complied with its continuing obligations under CERCLA and the IA. The liability relief offered by the COC is also transferable to subsequent property owners upon coordination with, and approval by, DEQ.

Because the COC offers complete liability protection for the past contamination addressed in the IA, it is imperative that the existing contamination is fully delineated at the site. For Participants seeking a COC, the Arkansas Brownfield Redevelopment Rule (APC&EC Rule 29) requires the completion of a CSA as opposed to the more limited scope of an ASTM-type Phase II Environmental Site Assessment. The CSA must establish a baseline for the existing contamination at the site so that any remedial efforts can be measured against the CSA results. For TBA Participants seeking a COC, the cost of a CSA averages between \$100,000-130,000 per site.

Overall basis for request: The Division of Environmental Quality (DEQ) has a Voluntary Response Program Memorandum of Agreement (MOA) dated December 21, 2000. Furthermore, the Arkansas Brownfield Program includes the Four Elements of a response program enumerated in CERCLA Section 128(a)(2):

1. Timely survey and inventory of brownfield sites in state or tribal land.

DEQ completed an initial survey and inventory of brownfield sites in 2001. DEQ does not currently maintain a formal listing of all potential brownfield sites within the state, but continually works in cooperation with communities and prospective purchasers to identify potential sites and to confirm their eligibility. DEQ also works with community redevelopment organizations and 104(k) CARs, which may have their own formal inventories of potential brownfield projects.

DEQ has established procedures wherein it can consider and respond to a request from a Participant for public assistance in performing an environmental site assessment on a site that is or may be affected by a release or threatened release of a hazardous substance, pollutant, or contaminant at a brownfield site located in the community in which the person works or resides. Upon receiving such a request, DEQ will consider and appropriately respond.

DEQ's public record provides a listing of sites currently being addressed under the Arkansas Brownfield Program, to include the site's facility identification number (for ease of reference within the DEQ's records management systems), the site name, address, city and county, and an indication as to whether the site has completed cleanup activities. New sites are added to the public record as they are identified and approved for entry into the Arkansas Brownfield Program.

2. Oversight and enforcement authorities or other mechanisms and resources.

The Arkansas Brownfield Program, in addition to the applicable CERCLA requirements, is administered under the provisions of the Arkansas Voluntary Cleanup Act (Act 1042 of 1997), Arkansas Code of 1987, Annotated, § 8-7-1101 et seq.

Completion of the necessary site characterization and site-specific remediation of a property in the Arkansas Brownfield Program earns the Participant a COC from the State. The COC guarantees relief from future liability for any contamination identified and addressed in the site cleanup and redevelopment plan; if this contamination poses problems in the future, the State of Arkansas is responsible for addressing and remediating those future risks. The COC may be transferred to a future owner upon coordination with, and approval by, DEQ.

Entry into the Arkansas Brownfield Program requires submittal of an application form and Letter of Intent. If the prospective purchaser is seeking a TBA, they are also required to submit a TBA Request Letter. Arkansas Brownfield Program staff determines site and Participant eligibility. For sites receiving TBA funding, a Property Eligibility Determination (PED) form is submitted to EPA prior to any site-specific expenditures.

Participants are required to enter the Arkansas Brownfield Program prior to purchase or entry into the chain of title for the enrolled property. Participants are also required to conduct a Phase I ESA pursuant to the current ASTM standard prior to purchase or entry into the chain of title for the enrolled property.

Arkansas Brownfield Program staff reviews the Phase I ESA. DEQ submits at least 10% of completed Phase I ESAs, including the All Appropriate Inquiries (AAI) checklists, to EPA for review. If recognized environmental conditions (RECs) exist, additional investigation is recommended. In

order to provide the Participant with relief from potential liability for any contamination currently at the site, DEQ requires the completion of a CSA. Work plans, including site-specific Quality Assurance Project Plans (QAPPs), are submitted to EPA for approval prior to sampling at TBA-funded sites. Following the completion of the CSA, the Participant is required to enter into an IA with DEQ (the Division) agreeing to address site contamination to a designated future site use. Once executed, remediation of the site is performed in accordance with a PDDD prepared by DEQ staff. The PDDD is prepared pursuant to the PDP previously submitted by the Brownfield Participant, and addresses and prescribes the necessary remedial actions to be taken in order to address and control any unacceptable risks to human health and the environment due to the identified conditions at the site.

Prior to conducting a CSA for a Brownfield site, the Participant is strongly encouraged to meet with the DEQ to agree upon the scope of work and field sampling to be performed, or to submit a CSA Work Plan for DEQ's review. Doing so will ensure that adequate work will be performed under work plans approved by DEQ. Upon submittal, the DEQ staff reviews the CSA for completeness and adequacy, and provides the Participants with detailed comments, including the need for any additional information in the CSA. Liability protection for the Participant is conditional upon full disclosure of environmental site conditions identified in the CSA. Should new information become available after completion of the project which was intentionally withheld by the participant, the release of liability will be null and void. However, if the Participant has exercised due diligence, made all appropriate inquiries, carried out the provisions of the IA with the Division, had no demonstrable knowledge of this new information, and the new information relates to a portion of the property addressed by the CSA, then it becomes the responsibility of the Division to address the issue and take any necessary remedial actions by means of the Arkansas Remedial Action Trust Fund (RATFA) and its implementing authorities.

The Participant is required to file a copy of the IA with the clerk of the circuit court in the county in which the site is located within thirty days of acquiring legal title to the property. This ensures that the notice appears on the chain of title for the property. The Participant must then submit to DEQ documentation that the notice appears on the chain of title within thirty days of filing with the circuit court. The Participant must file notice of any subsequent amendments to the IA in the same manner. If necessary, DEQ may require that a deed restriction be recorded in the land records for the property, which limits the future use of the property to activities and compatible uses which will protect the integrity of any remediation or other actions implemented on the property. If land use changes are anticipated, deed restrictions may be modified upon approval from the DEQ. If deed restrictions and other institutional controls are not adhered to, the Participant's liability protection provided by the IA and the COC may be voided, at the discretion of the DEQ Chief Administrator. It is the responsibility of the Participant to incorporate the terms of the IA as appropriate in subsequent lease or rentals agreements for the property.

DEQ provides necessary oversight during the Brownfield redevelopment process. DEQ staff conducts at least one inspection during field activities on projects which require remedial action. For all properties, a final inspection is conducted before the COC is issued by DEQ. This inspection is made to ensure that all of the requirements of the IA have been fulfilled. Additionally,

completed sites are inspected every five years to ensure compliance with requirements established in the respective IA, including follow-up operations and maintenance. The five-year review includes confirmation that documentation has been filed with the circuit clerk in the county in which the Brownfield property is located. Receipt by DEQ of documentation from the circuit clerk of the county in which the property is located will also ensure that proper notice of the IA has been filed on the chain of title for the Brownfield property. Audits may be conducted at any time, including after the remedial action is complete and after issuance of the COC. If the audit reveals the requirements of the IA have not been met, including operations and maintenance and institutional controls, liability protection provided by the IA and COC for the Participant may be voided at the discretion of the DEQ Chief Administrator.

3. Mechanisms and resources to provide meaningful opportunities for public participation.

DEQ is committed to providing opportunities for meaningful public notice and participation throughout the identification, assessment, and cleanup of brownfield properties in Arkansas.

The Arkansas Brownfield Program will engage directly with communities to assist in establishing brownfield inventories. Once a site is enrolled in the Arkansas Brownfield Program, DEQ will work to ensure that the community has meaningful opportunities to participate throughout the brownfield process.

Participants seeking a COC are required to enter into an IA with DEQ, and the Participant is required to provide to DEQ public notice of the IA in a newspaper of general circulation in the community in which the brownfield site is located. For TBA-funded sites, DEQ may assist in this process.

Upon receipt of the Participant's PDP, DEQ develops and issues a PDDD which defines the approved plans for cleanup and redevelopment for a specific property under the Arkansas Brownfield Program. The PDDD, PDP, and all assessments of the property are made available for the public to review both on the DEQ website and at the local library nearest to the site. For TBA-funded cleanups of sites contaminated with CERCLA pollutants and contaminants such as asbestos and/or lead-based paint, an IA is not required. However, the public will still have an opportunity to review all assessments of the property and an Analysis of Brownfield Cleanup Alternatives (ABCA), which is public noticed in the same manner as the PDDD.

DEQ provides a 30-day public notice and comment period for the PDDD and/or ABCA. Any interested person may request a public hearing on the PDDD and/or ABCA by giving the DEQ a written request within ten business days of the publication of a notice. For Participants seeking a COC, completion of remedial actions described in the PDDD is a condition for obtaining the COC, even when the DEQ determines that no further action is required at the brownfield site. As with the IA, this notice must be published in a newspaper of general circulation in the community in which the brownfield site is located.

4. Mechanisms for approval of cleanup plans and verification and certification that cleanup is complete.

Following the completion of the CSA and the negotiation and acceptance of an IA, the Participant prepares and submits a PDP which describes and details any needed clean-up activities as well as any other plans for development that provides protection or improvement of human health and the environment. The PDP is submitted to the DEQ staff for review. DEQ may require the participant to clarify or amend the PDP to achieve necessary health and environmental standards. Based upon the PDP, the DEQ staff then prepares and issues a PDDD, establishing the parameters and requirements for any needed remedy for the site. The PDDD employs and incorporates, as needed, the technical closure and post-closure standards.

Upon completion of the remediation or redevelopment set forth in the PDDD and confirming inspections by DEQ staff, DEQ provides the participant with a COC. Follow-up site visits and inspections may be conducted, and five year reviews are performed by DEQ to ensure that the selected remedy remains effective and that property use continues within the scope of the IA and the PDDD.

Public Records Requirement:

The Arkansas Brownfield Program has established and is maintaining a public record of sites at which response actions have been completed in the previous year and are planned to be addressed in the upcoming year. The public record is accessible on the DEQ website: https://www.adeq.state.ar.us/hazwaste/programs/brownfield/database.aspx#Display

Date of last update: April 26, 2023

Expected date of next update: May 26, 2023

How will the requested funding address EJ concerns in underserved communities and/or climate change impacts?

DEQ is committed to engaging directly with communities and working to ensure that community stakeholders are meaningfully involved in determining program benefits. E&E has a Special Counsel for Environmental Justice who is committed to advancing and incorporating proper Environmental Stewardship in the Department's programs and processes.

Environmental Stewardship & Disadvantaged Communities

DEQ has developed, and will continue to refine, the following strategies for meeting goals through the implementation of the Arkansas Brownfield Program:

1. Identify disadvantaged communities within the Arkansas.

DEQ will work to identify low income and disadvantaged communities using appropriate, available tools providing data to support the identification of these communities. Such tools use census data to determine if an area is identified as "disadvantaged" based on

burden thresholds and socioeconomic thresholds. Once a community is determined to be disadvantaged, DEQ will identify and engage with community stakeholders.

2. Identify key stakeholders and community leaders.

Within these communities, DEQ will work to identify trusted leaders and organizations that would be eligible for TBA funding.

3. Directly engage with disadvantaged communities.

DEQ will regularly conduct outreach events and work to educate communities about brownfields and the redevelopment process. Communities are unable to access resources that they are not aware of, so it is vital that DEQ continually promotes the Arkansas Brownfield Program and encourages communities to participate.

4. Assist in developing local brownfield inventories.

DEQ will work directly with community leaders and key stakeholders to help communities identify their own brownfield properties and develop their own inventories of sites where they would like to see redevelopment occur.

5. Prioritize site expenditures based on community engagement.

DEQ will prioritize site-specific expenditures based on feedback from the community. If the community is engaged and excited about a potential brownfield project, DEQ will direct site-specific expenditures to that project. This may also involve conducting visioning sessions and connecting communities to other resources.

6. Assist in the application process.

DEQ will meet with potential applicants to ensure that they successfully complete the application form and any necessary letters. DEQ will provide templates and examples if needed, and may also assist in obtaining legal descriptions, property records, and/or access agreements on behalf of Participants.

7. Provide assessment results to communities.

As assessments of enrolled properties are completed, DEQ will communicate the results to the TBA Participant and will provide DEQ contact information for any interested community members seeking additional information. All assessment results will be provided to the community once a remedy for the site has been selected.

8. Provide an opportunity to comment on cleanup plans.

If cleanup is required, DEQ will prepare a PDDD or an ABCA outlining the remedial actions planned. DEQ will be responsible for providing public notice of the PDDD or ABCA in a newspaper in general circulation in the area where the brownfield is located. DEQ will also post these documents to the DEQ website and provide copies to the library nearest to the brownfield site. Following public notice of the PDDD or ABCA, DEQ will provide a 30-day public comment period. If requested, DEQ will hold a hearing or community

engagement event to address any questions or concerns. DEQ may travel to the community to participate in meetings, if needed.

9. Celebrate success with communities.

When remedial actions are complete, DEQ will work with communities to celebrate their successes. If the Participant received a COC, DEQ may hold a presentation ceremony at the brownfield site.

10. Continue to improve the public participation process.

DEQ will work to improve the public participation process to engage wider audiences and ensure that all concerns are addressed. This will include exploring new methods of disseminating information and providing public notice to communities, such as posting on social media. It will also include identifying communities that may be linguistically isolated and working on a plan to engage those communities effectively.

Climate Change Mitigation

In the past 50 to 100 years, Arkansas has warmed less than other parts of the country, and some areas of the state have even cooled. This phenomenon is due to natural cycles and the presence of sulfates in the atmosphere, which bounce sunlight back into space. As sulfate emissions decline, average temperatures are rising and are expected to continue rising in the future.

As the climate warms and evaporation increases, Arkansas is expected to experience more frequent, persistent, and severe floods and droughts. Overall rainfall is expected to decrease, while the amount of precipitation falling during heavy rainstorms is likely to increase. These changes will lead to increased storm damage, reduced crop yields, harm to livestock, and damage to ecosystems. Flooding and droughts will also impact transportation on the Mississippi and Arkansas Rivers, at a huge economic cost to the region.

Brownfield programs and workplans address climate change mitigation, adaptation, and resilience. Mitigation includes interventions to reduce impacts on the climate system, such as reducing emissions and increasing greenhouse gas sinks. Adaptation consists of efforts to prepare for and adjust to the impacts of climate change. Resilience refers to communities' ability to anticipate, prepare for, respond to, and recover from climate change impacts with minimal damage to the community and the environment.

As a facilitator of redevelopment, the Arkansas Brownfield Program can allow the use of climate-smart strategies throughout the assessment, planning, and cleanup of brownfield sites. Phase I ESAs and Phase II CSAs can consider site-specific climate impacts; PDDDs can evaluate the long-term effectiveness of various cleanup alternatives; and green remediation efforts can be implemented during the cleanup stage. While the Arkansas Brownfield Program cannot directly spend funding on redevelopment, the program will continue to support building techniques, infrastructure, and energy production that improve accessibility to and efficiency of community amenities and public spaces.

Planned Use of FY24 IIJA Funding

Planned	Planned Use of FY24 Funding by Object Class Category – IIJA Funds						
	Task 1: Planning & Management	Task 2: Program Enhancement	Task 3: Site-Specific Activities	Total			
Personnel	\$21,274.00	\$35,923.00	\$20,225.00	\$77,422.00			
Fringe (37.34% of Personnel)	\$7,943.00	\$13,414.00	\$7,552.00	\$28,909.00

Department of Public Safety-Arkansas State Crime Laboratory Infrastructure Investment and Jobs Act Plan

The Arkansas Department of Public Safety-Arkansas State Crime Laboratory (ASCL) is requesting Infrastructure Investment and Jobs Act appropriation in the amount of \$357,300 for the MVC Toxicology portion of the Highway Safety Grant.

Background:

The Highway Safety grant funds awarded by the U.S. Department of Transportation (DOT)-National Highway Traffic Safety Administration (NHTSA) and reauthorized through the federal Infrastructure Investment and Jobs Act (IIJA) also known as the Bipartisan Infrastructure Law (BIL). This existing grant program provides funds to perform complete comprehensive toxicology testing of motor vehicle crash samples in a timely manner to satisfy Fatality Analysis Reporting System (FARS).

The Toxicology Section has received this grant for four fiscal years (FY20, 21, 22, 23, 24) to purchase equipment and consumables to help reduce turn-around-times and provide thorough analysis for motor vehicle crashes.

Purpose/Goal:

The purpose of this award is to aid the Toxicology Section with essential supplies. Program efforts include complete screening and confirmation testing of all motor vehicle fatalities to the Fatality Analysis Reporting System to improve data collection on impaired driving, serious injury, and fatal crashes.

These funds will be utilized for purchasing materials such as pipettes, drug standard and screening kits, blood alcohol kits for Law Enforcement and toxicologists, and training of staff.
