## SAFETY AND LOSS PREVENTION RECOMMENDATIONS

Agency: **ASU-Mid South**  
 Location(s): **All locations to date**  
 AS OF: **9/20/2022**

177

**Designate Status of each recommendation below, at left:**

- 1 Fire protection. **(1)**Fire extinguishers do not have sufficient signage for visibility in the welding class area (this should be observed and noted during monthly inspections). Building 6, recommendation 31(2) applies. **(2)**One or more fire extinguishers were observed in an overcharged state (e.g. room 105A). An overcharged status indicates the possibility of an unsafe release of excess pressure resulting in an accidental discharge. An undercharged status indicates there is inadequate pressure to release sufficient suppressant to extinguish a fire. These conditions require servicing by an approved vendor. **(3)**The fire extinguisher sitting on the floor of the mezzanine needs to be wall mounted with appropriate signage for visibility. Building 6, recommendations #1(2) and #1(3) apply, and **(4)****Auxiliary lights in multiple areas failed testing (this is a systemic issue campus wide). One or more auxiliary lights were also found to be inaccessible for testing (this is a systemic issue campus wide). Annual testing is required per NFPA 101 on all auxiliary lights and exit signs. These lights must be activated for a minimum of 90 seconds to confirm the battery-powered light source is operational. Documentation must be maintained at the facility and NFPA 101 requires functional tests of auxiliary lighting at 30-day intervals for not less than 30 seconds. Exit signs must be visually inspected monthly to confirm illumination as required by the code.**
- 2 Flammable/combustible. **(1)**The tanks in the "tank cage" containing flammable/combustible compressed gases should be chained or racked to prevent tip over. Oxygen and acetylene tanks, as well as other compressed gas bottles, should be stored in a separate area and chained to a solid wall. The distance between oxygen and acetylene tanks must either be a minimum of 20 feet or by installing a non-combustible barrier as high as the cylinders (usually approximately five (5) feet) and having a fire rating of at least ½ hour, and **(2)****Two pallets of hand sanitizer were being stored on the mezzanine along an interior wall near other combustible material. The pallets should be removed and stored in a more controlled environment with sufficient fire protection or the amount of hand sanitizer kept on site should be reduced.** Other hazards are present that increase the risk of an uncontrolled fire in this area.
- 3 Electrical distribution. **(1)**Open and exposed wiring was found on the mezzanine and in the HVAC room located on the mezzanine. Building 6, recommendation #1(3) applies, and **(2)**The electrical panel on the mezzanine was found to be missing knockout plugs in positions 14, 16, 18 and 20. Building 6, recommendation #2(2) applies.
- 4 Exposure (general). The water heater inspection certificate, on the unit housed in the HVAC room, expired August of 2021. A current inspection certificate should be displayed ensuring that all safety and construction standards have been met.
