

SHARE

State Health Alliance FOR Records Exchange

EXHIBIT C1

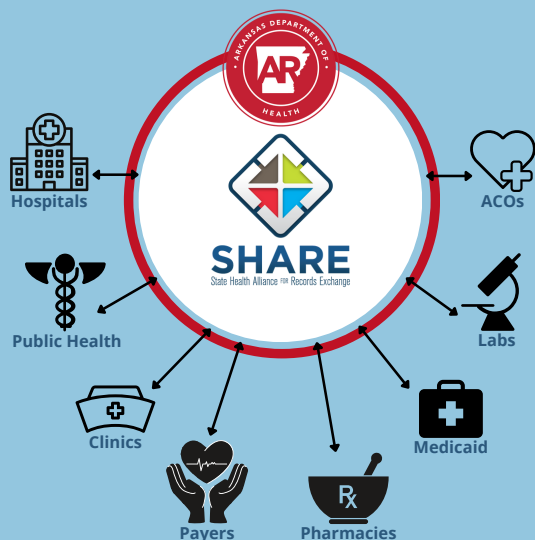

OUR MISSION

Our mission is to improve the delivery, coordination, and quality of health care across Arkansas through the statewide use of information technology and clinical data exchange.

OUR VISION

Our vision is a healthier state population and a greatly improved health care system in which caregivers and patients have electronic access to more complete health records and are empowered to make better health decisions with this information.

OUR PROGRESS

124 Hospitals contributing data
3,609 Facilities contributing data
Patient records on over 3 million Arkansans

SHARE

The Arkansas State Health Alliance for Records Exchange (SHARE) is a state-wide health information exchange (HIE) that is overseen by the Office of Health Information Technology, a division of the Arkansas Department of Health. SHARE allows participating hospitals, doctors, nurses, specialists, health service professionals, clinically integrated networks, accountable care organizations, payers, and public health authorities to access and securely exchange with each other real-time, electronic patient information that is protected by federal and state privacy and security laws.

SHARE provides health information in a standardized electronic format and enables medical data to follow patients rather than being housed in separate physician's offices or within a single hospital system. SHARE can greatly improve the completeness of patient records, which can have a major effect on care when medical history, current medications, and other information are reviewed during visits.

Appropriate, timely sharing of vital patient information through SHARE can better inform decision-making at the point of care and allow providers to:

- Avoid hospital re-admissions
- Avoid medication errors
- Improve diagnoses and decrease duplicate testing
- Improve patient care coordination for ED and Inpatient discharges
- Promote improved management of chronic diseases
- Improve Public Health reporting

Participating SHARE providers have access to their patients' lab results, X-ray reports, medication allergies, and other vital information. By viewing health histories in SHARE, health care providers will have more complete medical information to provide high-quality care and coordinate treatment with other health care providers.
