HANDOUT 2

Broadband Mapping in Arkansas

**ARKANSAS
GIS OFFICE**

Recent Broadband Mapping

- Nearly all major broadband mapping results in Arkansas were accomplished by Connect-Arkansas.
- Connect-Arkansas partnered with the Arkansas GIS Office to coordinate address point level data that would aid their broadband analysis.

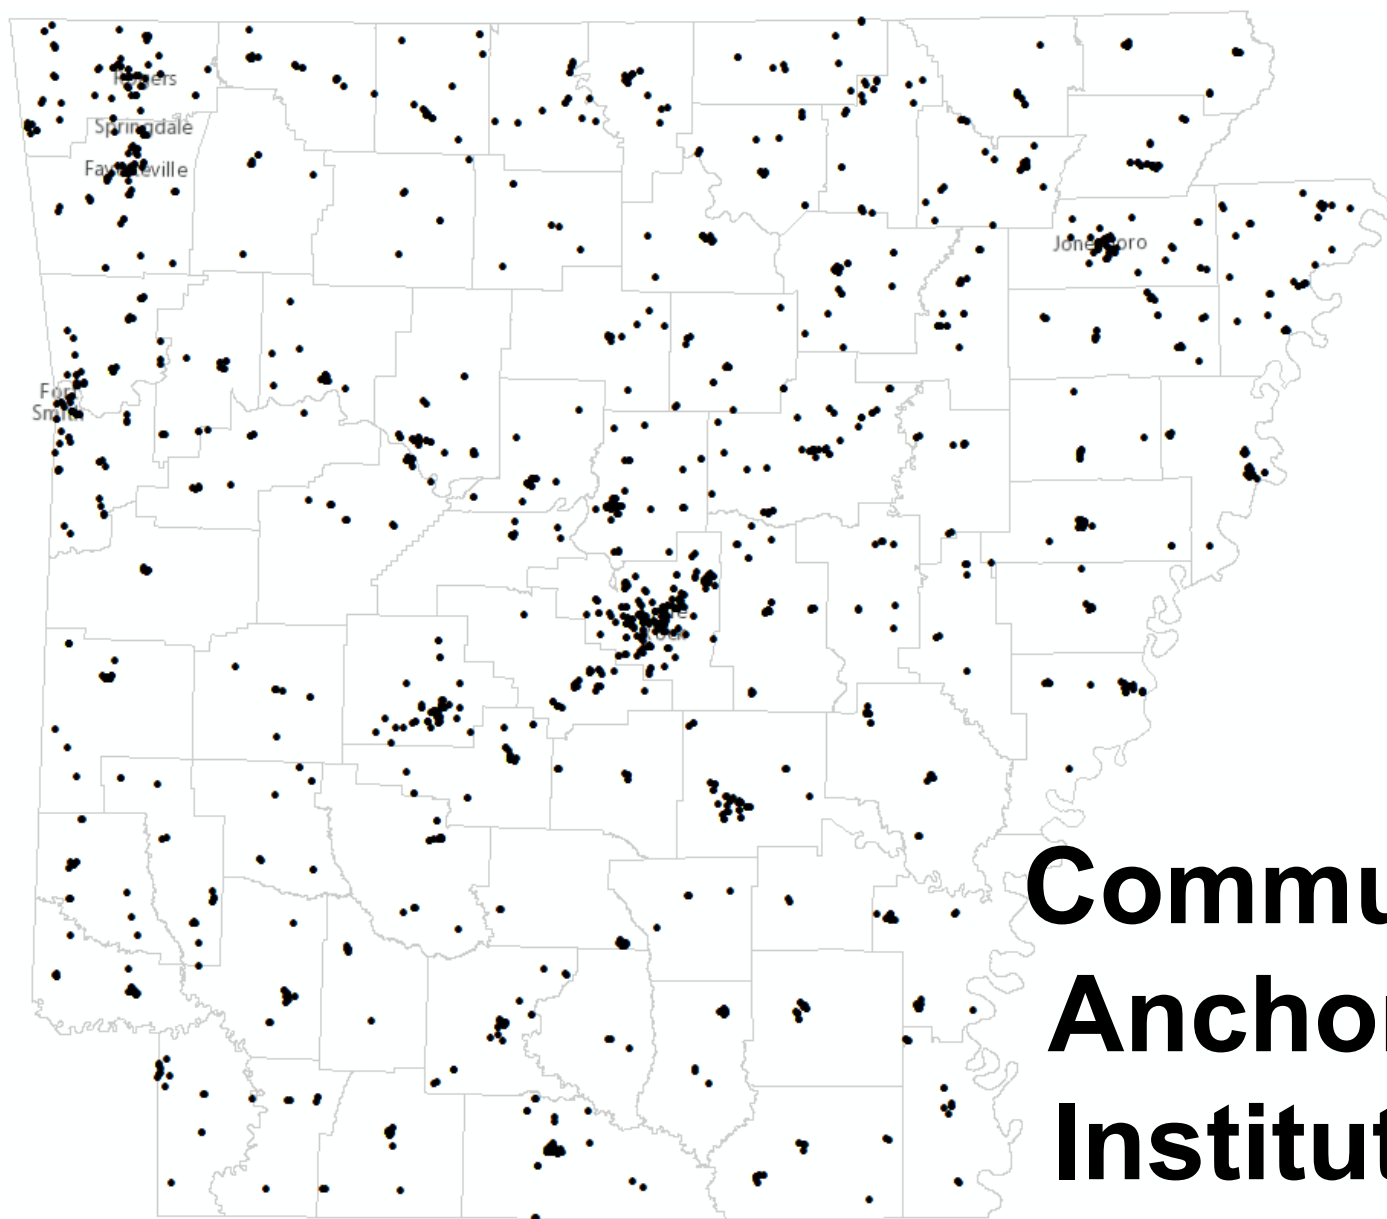

The Great Challenge of Mapping Broadband

- The location of nearly all broadband infrastructure is owned by private providers.
- Provider schizophrenia
 - We don't want everyone to know where our infrastructure is located. Someone might do damage.
 - Here's where our infrastructure is located, so please don't do any damage.

Recent Broadband Mapping (cont)

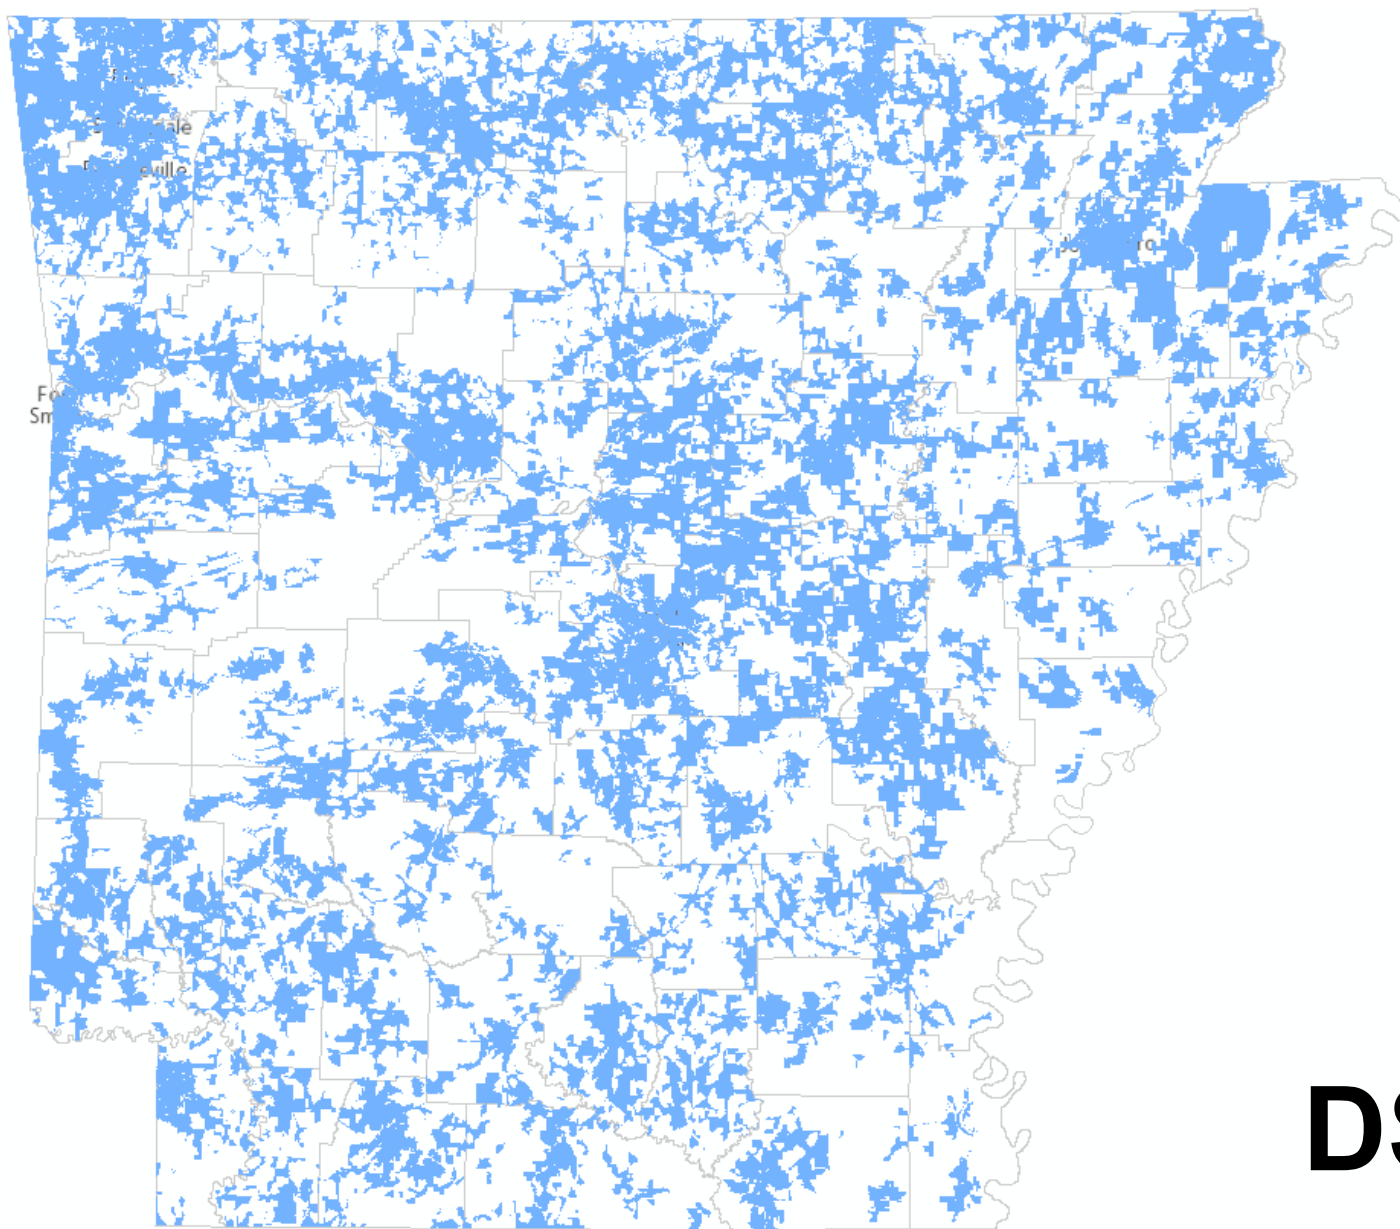

- Connect-Arkansas' pseudo-governmental status allowed them to sign Non-Disclosure Agreements with providers.
- Maps on the following slides represent an aggregation of the result. This is the same data presented on the National Broadband Map
