Academic Facilities Master Plan Program- State Plan

*For the Governor, the House Committee on
Education, the Senate Committee on
Education, and the Academic Facilities
Oversight Committee*

October 1, 2006

2006 Report on Academic Facilities Master Plan Program – State Plan

Preamble “...to ensure that adequate facilities and substantially equal facilities are, and will continue to be provided for Arkansas’ school children.” ————Act 1181 of 2003

Act 1426 of the Regular Session of 2005 mandates that the Division of Public School Academic Facilities and Transportation develop a comprehensive state Master Plan for managing state financial participation in local academic facilities projects across the state. The Act further states that the state academic facilities plan shall include the following:

- A) A list of committed projects for Public School Academic Facilities for the upcoming fiscal year characterized by program and method of state financial participation.
- B) The total estimated cost of each committed project and the estimated amount of state financial participation.
- C) A four-year rolling forecast of planned new construction projects related to public school academic facilities

Act 1327 of the Regular Session of 2005 further states that a report on the state academic facilities master plan will be made to the Governor, the House Committee on Education, the Senate Committee on Education, and the Academic Facilities Oversight Committee by October 1 of each even numbered year.

The basic tenants of the Academic Facilities Program include five different components designed to guide state and local management of school facilities from a variety of perspectives:

- A) The Academic Facilities Master Plan Program. It is through this program that each school develops and submits a Facility Master Plan for review and approval by the Division. A Facility Master Plan is a ten-year plan developed by a school district that contains current enrollment projections and details the school district’s strategy for maintaining, repairing, renovating, and improving through new construction or otherwise the school districts academic facilities and equipment. The Division is charged to analyze each local Master Plan against the assessment data for the school district submitting the plan. Using the assessment data for oversight purposes is meant to ensure that local Master Plans contain appropriate and reasonable content. Assessment data will be continually updated as local Master Plans are approved and projects completed. From these Master Plans the Division develops a statewide Master Plan which serves as a management tool for overseeing the progress of local academic facilities projects across the state.
- B) Academic Facilities Custodial Maintenance Repair and Renovation Manual. The Academic Facilities Program process contains a manual of uniform standards for

custodial maintenance repair and renovation activities in public school academic and non-academic facilities at the local school district level. Beginning with the 2005-2006 school year districts are required to dedicate 9% of foundation funding exclusively for the payment of utilities, custodial, maintenance repair and renovation activities and related personnel costs. The Academic Facilities Custodial Maintenance Repair and Renovation Manual will be used during the submission of the Master Plan to be made by February 1, 2008 to provide those tenants of the Master Plan that encompass custodial schedules and the Preventive Maintenance Program. The initial publication of this manual was included as section four of the Arkansas Public School Academic Facility Manual described below.

- C) Arkansas Public School Academic Facility Manual. This manual was developed to provide uniform standards to guide the planning, design, and construction of new public school academic facilities and additions to existing public schools. Since the last report the Arkansas School Facility Manual has been submitted and been approved by the various legislative committees. In September 2005, it was published and made available to all school districts for their initial Master Plan submissions by February 1, 2006 for the first three years.
- D) Public School Academic Equipment Manual. The Public School Academic Equipment Manual was tentatively completed in 2005. It is presently undergoing a final review by the Department of Education to ascertain the required levels of equipment at each facility necessary to conduct the academic programs as they are presently conducted throughout in the state. Once completed this manual will become the basis of a portion of the February 2008 Master Plan submittal.
- E) Academic Facilities Distress Program. This program is designed to provide intensive state oversight and assistance to those school districts that fail to properly maintain their academic facilities in accordance with the academic facility laws and the related rules. The school district can be required to cease immediately all expenditures that do not relate to providing an adequate education. Those funds would then be placed in an escrow account to be released only by the approval of the Division for local academic facilities project. The Division may exercise an option to take over the operation of the school district in order to secure, for the students of the district, the opportunity for an adequate education.

In addition to the basic tenets of the Academic Facility Programs, recent legislation has also widened the parameters for monetary assistance and for managing state financial participation.

- A) An Act to establish the Extraordinary Circumstances Program for Public School Academic Facilities, Act 34 of the First Extraordinary Session. This Act will be implemented through rules that should be developed in late 2006. Under this act the Commission for Public School Academic Facilities and Transportation Division shall develop rules which shall provide state financial assistance to eligible school districts that do not have sufficient means to contribute an amount of local resources necessary to qualify for state financial participation under the Academic Facilities Partnership Program.

- B) Act 22 of the First Extraordinary Session of 2006. An Act entitled “An Act to Remove the Statutory Limitation on Bonded Indebtedness for School Districts and for Other Purposes” This Act removed the limitations as expressed in A.C.A. 6-20-1202, that allows the district to increase its indebtedness to support academic facilities program.

Supplementing the aforementioned Acts is Act 2206 of the Regular Session of 2005 entitled “Arkansas Public School Academic Facility Funding Act” It is the intent of this Act to provide the funding programs by which state financial assistance is rendered to school districts under the following academic facilities program.

A) Academic Facilities Immediate Repair Program. The Academic Facilities Immediate Repair Program was put in place to provide immediate assistance to school districts to begin a process of correcting deficiencies that were noted during the assessment of 2004. Under this program school districts were to be provided with state financial participation for eligible repair projects based on the Academic Facilities Wealth Index of the school district. Eligibility under this program requires the school districts to meet the following criteria:

- 1) An application was to have been received by the Division by July 1, 2005.
- 2) The condition for which the repair is needed was in existence on January 1, 2005.
- 3) The building’s facility condition index is less than 65%.

The program was designed to address the correction of deficiencies in academic facilities that present an immediate hazard to health or safety of students and staff meeting minimum health and safety building standards or the extraordinary deterioration of the academic facility.

Under this program the Division recommended and the Commission approved 301 projects totaling approximately \$76 million dollars. Of this total amount, \$35 million dollars constituted the state’s financial participation. This program is presently ongoing. As of this report 178 of 301 projects have been funded. It is anticipated that this program will run through 2007. It will be the only program by which the state offers state financial participation for maintenance and repair of facilities.

B) The Transitional Academic Facilities Program. The Transitional Academic Facilitates Program was put in place to provide state financial participation based on a school district’s Academic Facilities Wealth Index in the form of reimbursement to a school district for eligible new construction projects for which debt was incurred or funds are spent after January 1, 2005 and on and before June 30, 2006. Under this program a school district was allowed to proceed with new construction of an academic facility due to the expenditure of local resources prior to the district’s eligibility for state financial participation. New construction projects includes any improvement to the academic facility and if necessary related areas such as the physical plant and grounds that bring the state of condition or efficiency of the academic facility to a state of condition or efficiency better than the facility’s original condition of completeness or efficiency. New construction include additions to existing academic facilities and new academic facilities. Districts were allowed to apply the expenditure of local resources after January 1, 2005

and incurred prior to June 30, 2006 towards meeting the school district's share of financial participation in the cost of the new construction project when and if the school district became eligible for state participation under the Transitional Academic Facilities Program. Districts were instructed to be prepared to fund the entire cost. Under the Transitional Program school districts were required to complete application forms in accordance with the rules and procedures developed by the Division of Public School Academic Facilities and Transportation. The Division then reviewed all applications using the following criteria:

- 1) The evaluation of the application and all supporting evidence and documentation.
- 2) The Division's evaluation of the onsite inspection.
- 3) The Academic Facilities Wealth Index of the school district.
- 4) The prudent and resourceful expenditure of state funds with regard to public school facilities.

If a school district qualified for state financial participation through the Transitional Academic Facilities Program the Division certified that amount of state financial participation and made a recommendation to the Commission on Public School Academic Facilities and Transportation. Reimbursement is being made to the districts on satisfactory completion of the project if the project was completed prior to the date of submission or prorated payments which are being made to the districts as the projects continue, provided the projects were substantially begun prior to June 30, 2006.

The Transitional Program was to bridge the gap between the assessment and immediate repairs and the implementation of the Partnership Program explained below. There were 213 approved projects on the Transitional Program totaling an estimated \$299 million dollars. Of this amount approximately \$ 87 million dollars is the state financial participation. As of the writing of this report 106 of these 213 projects have been completed. It is anticipated that the Transitional Project Program will run through March 2008.

C) Academic Facilities Partnership Program. The Academic Facilities Partnership Program is the principal funding program to support the long range goals and objectives of the school districts as defined in their Master Plan. State financial participation in the form of cash payments is made available to a school district for eligible new construction projects. The Partnership Project Program is keyed to the Master Plan Program. Each project for which state financial participation is requested must have been listed on the districts most recent Master Plan. The Master Plan must have been approved and the project must clearly show that it supports the intent of the Mater Plan and the direction the district is taking to correct deficiencies, compensate for changes in growth patterns, and increase the equity of its facilities to support current and future academic requirements.

D) Academic Equipment Program. State financial participation is available to purchase eligible unattached academic equipment. This program has not been implemented. The equipment list is presently being reviewed by the Arkansas Department of Education and

it is anticipated that it will be a component of the Master Plan submittal by February 1, 2008.

E) Academic Facilities Catastrophic Program. State financial participation is available for eligible catastrophic repair and construction projects for the purpose of supplementing insurance or other public or private emergency assistance received by or payable to the school district.

The Master Plan Process. The school district Master Plan process upon which the state Master Plan is based entails the submission of a ten-year plan based on weighing the components of the 2004 assessment, growth indicators in the school district, and suitability standards to meet academic needs. These three aspects in combination are the basis of a Master Plan submitted of February 1 of each even numbered year by the school districts to the Division against which partnership project applications are made. The Master Plan outlines the roadmap for recovery and enhancement of the school districts facilities to compensate for deficiencies, growth, and changes in the academic program.

The initial Master Plan submittal was made in February 2006 and covered only the first three years. Commensurate with the Partnership Program applications that were received by March 1, 2006 to support only the first of the three year projects identified to support the Master Plan. Project applications for the second two years will be submitted by the districts by November 1, 2006.

The other major aspects of the of the Master Plan which cover maintenance and repair, custodial operations, equipment, projected replacement schedules for major building systems, identification of issues with regard to facility and program access to individuals with disabilities will be submitted with the February 2008 Master Plan.

The law further states that in February of the odd-numbered years the districts will provide an update on all projects completed as identified since the last Master Plan submittal and in the case of the first update submission in 2007 the remaining anticipated projects that the district desires to schedule and undertake for the next seven years of the initial ten year plan. The intent of the Master Plan is to develop an improvement process to remediate the building and facility inadequacies throughout the state. It is also to improve the equality and efficiency of education for the students in the state of Arkansas. It establishes a mechanism for state supervision of school district activities impacting academic facilities and equipment. It develops and continuously updates information critical to identifying academic facilities needs at the local level and across the state and assist the state in managing state financial participation and eligible academic facility projects.

Attached is a chart which indicates state financial participation payments prior to 2006-2007, the anticipated expenditures of state funds in 2006-2007, and a four year rolling forecast based on approved projects in 2006, and anticipated Partnership Program projects to be received for fiscal years 2007-2008 and 2008-2009. This four year

forecast is subject to school district decisions to be made as a result of recent failed millage elections and the submission of planned projects to begin in 2007 and 2008.

The Commission for Public School Academic Facilities and Transportation approved \$121.9 million in fiscal year 2005-2006 for the Immediate Repair and the Transitional programs. \$30.6 million was expended during fiscal year 2005-2006 for those two programs. Most of the remaining expenditures for those programs will occur in fiscal year 2006-2007, with a few remaining expenditures projected to occur in fiscal year 2007-2008.

The Commission approved \$277.9 million in fiscal year 2006-2007 for the Partnership Program. The Commission will approve by May 1, 2007 the list of Partnership Program projects and state financial participation for those projects for projects that will begin in fiscal years 2007-2008 and 2008-2009.

The Division used the following process to estimate project and program expenditures for the Partnership Program. For projects less than \$100,000, the Division assumed that all project expenditures would accrue in the first year of the project. For the remainder of the program amount for all projects larger than \$100,000, the Division estimated that the program expenditures would accrue over a 30-month period, and that 15% of the accruals would occur in the first year, 65% would accrue in the second year, and the remaining 20% would accrue in the third year.

Using this process, it is projected that about \$123 million of expenditures will occur for all three programs in fiscal year 2006-2007, and that \$ 403 million will be expended in the next biennium beginning July 1, 2007.

Projections for the following biennium beginning July 1, 2009 can not be estimated until Partnership Projects for 2009-2010 and 2010-2011 are submitted with the districts' master plan updates by February 1, 2007. However, \$150 million of projected expenditures are expected to occur during the biennium beginning July 1, 2009 for Partnership projects that have been approved or planned for 2006-2009.

As outlined in Act 1426 also attached hereto is a list of committed projects for Public School Academic Facilities for the upcoming fiscal year. These projects are categorized by program, and method of state financial participation. The chart also indicates the total estimated costs of each committed project and the estimated amount of state financial participation.

Statewide state of condition of academic facilities

*For the Governor, the House Committee on
Education, the Senate Committee on
Education, and the Academic Facilities
Oversight Committee*

October 1, 2006

2006 Report on condition of academic facilities statewide

Preamble “...to ensure that adequate facilities and substantially equal facilities are, and will continue to be provided for Arkansas’ school children.” ———Act 1181 of 2003

The Commission for Arkansas Public School Academic Facilities and Transportation submits this annual report pursuant to Act 1327 of the Regular Session of 2005. This report conveys the progress of actions undertaken by the Arkansas school districts to enhance, renovate, and add to the state’s school facilities toward the goal of equitable surroundings for education.

The units of measure to track the advancement of the condition of our public school systems are the 12 general building and design systems of major facility structures as outlined in the referenced act. These are:

- A) site land and improvements
- B) roofing
- C) exterior
- D) structure
- E) interior
- F) heating ventilation and air conditioning
- G) plumbing and water supply
- H) electrical
- I) technology
- J) fire and safety
- K) specialty items
- L) space utilization

The programs enacted by various legislation have defined the state’s participation into three general programs.

- A) Academic Facilities Immediate Repair Program. State financial participation was made available for eligible projects designed to address the correction of deficiencies in academic facilities that present an immediate hazard to health or safety of students and staff, meeting minimum health and safety building standards, or the extraordinary deterioration of the academic facility. To be eligible for this program the deficiencies must have been in existence on January 1, 2005. Applications must have been made to the Division by July 1, 2005. The estimated cost of the Immediate Repair project had to have been a minimum of \$100 per student or \$ 50,000.
- B) The Transitional Academic Facilities Program. State financial participation was made available to the school districts in the form of a reimbursement for eligible new construction projects for which debt was incurred or funds were spent after January 1, 2005 and on or before June 30, 2006.

C) Academic Facilities Partnership Program. State financial participation is being made available in the form of cash payments to school districts for eligible new construction projects. A new construction project includes any improvement to an academic facility and, if necessary, related areas such as the physical plant and grounds that bring the state of condition or efficiency of the academic facility to a state of condition or efficiency better than the facility's original condition of completeness or efficiency. New construction includes addition to existing academic facilities and new academic facilities.

Participation in these three programs has been outstanding. The infusion of state funds to augment locally derived funds to improve and enhance the state's academic facilities will prove to be beneficial to students, staff, and faculty, and will most assuredly prolong the life of the school districts facilities in addition to beginning to bring them up to equitable standards across the state.

Enclosed is a tabular form indicating projects that have been approved and funded under each of the three programs outlined above. In addition, it is compared to the 2004 state-wide assessment of school facilities.

As may be seen by a comparison to the original assessment, districts are beginning a conscious and earnest endeavor to correct their facilities and to begin to bring their facilities in line with academic standards and needs.

The conclusion can be drawn by the statistics provided, that Arkansas school facilities are beginning a slow revival toward becoming more equitable. The most recent information indicating the success of this program shows:

A) 301 Immediate Repair Projects, which were approved by the Commission, totaling \$ 76.6 million of which \$35.0 million was state participation. Due to combination projects that addressed multiple system needs, the 301 immediate repair projects addressed 586 system requirements. As of this date 178 of those projects have been funded with disbursements of \$20.3 million. This indicates that they are complete or in the process of being completed. Districts are required to notify the Division upon the completion of the project and file a final close out report.

B) The Commission for Public School Academic Facilities and Transportation approved 213 Transitional Program projects totaling over \$299 million. These 213 projects addressed 232 system requirements. To date, 106 of these projects have been reported as being completed. Of the state's share of \$ 86.9 million, the state has reimbursed the school districts \$ 26.6 million dollars to date.

C) The Partnership Program began with the application submission by March 1, 2006. To date, no projects have been reported as being completed. The state's share of the \$642.7 million of projects is \$277 million dollars.

The school districts are required to report to the Division by February 1, of each odd-numbered year the status and description of projects completed in the school district since the submission of the school district's most recent facilities master plan. The Division supplements these districts reports with onsite visits of construction and assistance visits in the preparation of future projects.

Summary and Conclusion

At this point in time it is too early to determine the overall impact of the first two programs as outlined above. The Immediate Repair Program appears to be successful as districts are responding well and many deficiencies identified in the 2004 assessment are being corrected. However, it will be imperative for school districts to utilize the mandated 9% of foundation funding expenditures for maintenance, renovation, and repair activities to complete necessary repairs identified in the assessment.

The new construction projects to build new facilities or improve existing facilities over the original condition that were initiated and funded under the Transitional Program have begun and will extend to the next two years.

It is anticipated that an increase of the Division's personnel next year will more readily accommodate an onsite inspection process which will enable this annual report to be more descriptive and definitive in the true condition of Arkansas school facilities.

Academic Facility Funding

	2004 Assessment		Immediate Repair		Transitional		Partnership 2006-2007
System	Project Cost	Activity	Project Cost	Activity	Project Cost	Activity	Project Cost
